

Market leader Karl Roll GmbH can now reflect on 50 years of manufacturing high quality industrial cleaning systems at it's headquarters in southern Germany.

Fulfilling the requirements of manufacturing industry throughout the world, today the Company is renowned for both it's advanced technical design capability and high quality of manufacture. From humble beginnings in 1956 when founder Karl Roll decided it was time to offer effective cleaning plant to match the steadily advancing innovations in manufacturing industry, the Company has outgrown a number of premises and now occupies modern factory facilities in Mühlacker totaling 8,000 square metres and employing over 150 people.

As early as 1957 Roll had delivered it's first carousel cleaning plant and today offers a wide range of wet cleaning technologies including immersion and spray processes for both aqueous and solvent cleaning media. In particular, as legislation in Europe has grown ever more stringent over the use of products such as chlorinated solvents, general hydrocarbons and modified alcohols, Karl Roll GmbH has consistently led the market with advanced designs in critical areas such as ultrasonic technology and system integrity.

Now with 50 years experience in the field of industrial cleaning and degreasing, Karl Roll GmbH is fully equipped to meet the requirements of modern manufacturing sectors including automotive and aerospace industries along with their subcontractor supply chains, general and precision engineering as well as surface treatment applications including heat treatment and electroplating

The high quality of product which has become synonymous with the brand name of Karl Roll GmbH is largely a result of the degree of direct control over manufacturing processes. Flexibility and quality is achieved by keeping all aspects of production inhouse where the wide range of cleaning technologies on offer is subject to a philosophy of continuous improvement.

From standard machines to complex bespoke installations, Roll works closely with each client in order to ensure a smooth transition from application analysis through design concept to final installation and commissioning.

Certainly with the experience and technical excellence achieved within the first 50 years it is difficult to imagine an area of industry or a specific task which has not been addressed by a system from Karl Roll GmbH.
